Architecture AutoCAD Architecture is designed to be a more complete, yet simpler application than AutoCAD. Architecture was the product of a team at Autodesk who originally were part of the Architecture Division. Architecture focused on architectural drafting, initially for the drafting community of the 1980s, and evolved from drawing into the 1990s. The company created a number of products including Parse Services and others. Benefits AutoCAD Architecture is better at creating a drawing than AutoCAD, and also offers better collaboration. It works with other software besides AutoCAD and is available on various platforms, including mobile devices, laptops, and as a web-based application. It has also been used in construction projects and is a popular choice for architecture students and university students. AutoCAD Architecture supports a range of file formats including: DXF, which can be viewed in AutoCAD and other software. DWG, the native CAD format, which is supported by other CAD packages. DWF, the native PDF format. ArchXML, which is native to AutoCAD Architecture. It has the ability to import and export to other CAD packages such as Autodesk Inventor and Revit. Application programming interfaces AutoCAD Architecture supports the following APIs: AutoLISP - A programming language that allows the creation of VBA macros for AutoCAD Architectural. The AutoCAD Architecture development team contributed this to the community in 2004, and has been available since AutoLISP 2.5. Visual LISP - A visual programming language for AutoCAD Architectural. MS Visual Basic for Applications - A programming language used to write macros and user extensions in AutoCAD Architectural. .NET - A programming language that can be used with AutoCAD Architectural..NET allows the development of UDFs (User Defined Functions) for AutoCAD Architectural. ObjectARX - A class library for.NET. ObjectARX is based on AutoCAD's ObjectARX. See also Autodesk List of AutoCAD add-ons List of
