AutoCAD

What is AutoCAD? AutoCAD is a leading program for drafting, design, and engineering on the computer. A AutoCAD user usually can draw 3D

objects with such tools as the pen or a drawing ruler, as well as create 2D objects with lines, circles, arcs, rectangles, polylines, text, and dimensions. AutoCAD also allows user to place and label objects, rotate objects, and connect objects together. AutoCAD has extensive functionality for working with geometric shapes and three-dimensional objects. AutoCAD is an industry standard for design,

engineering, and architecture.

Features of AutoCAD Draws 3D models It allows user to use paper drawing tools and layout tools such as the pen and a drawing ruler. **Types of objects** 3D modelers can draw solid models, surface models, and objects that have a cross section. **Line tools** It can make straight lines, circular lines, and arcs. **Placement tools** It can place an object at any point in space. **Arrows** It can make

natural looking arrows. Labeling tools It can create text, annotate drawing surfaces, and create labels.

Text tools It can make text and create text boxes. Tools for angles It can create angles, angle lines, and angle segments. Tools for dimensions It can make 3D dimension lines and blocks. Printing It can create a drawing on paper. AutoCAD for Mac Windows AutoCAD is a powerful and multifaceted software

that can be used in the following fields: Railroads and construction industries, such as bridges and tunnels. Civil engineering, such as building and drainage systems.

Architectural design, such as furniture and architectural elements.

AutoCAD software allows you to draw objects, add text and labels, and place and label objects. You can connect objects together to create more complex models. You can also

manipulate objects with 3D tools and make annotations. These tools and techniques are applied in many industries and are used to solve engineering and design problems.

AutoCAD's ability to draw 3D objects can be used in different industries: The 3D CAD application can be used to create drawings that are compatible with different industry standards. 3D CAD applications are increasingly

A major earthquake has struck Nepal with an aftershock also reported. The magnitude-7.3 quake struck early on Wednesday, with the US Geological Survey saying it had a depth of 122 miles (200km). It was centred some 75 miles (120km) east-northeast of Kathmandu and was felt in several

cities across northern India. The Himalayan nation is in a state of emergency, with aid agencies reporting power outages and falling water levels in its main dam. In a statement, the UN said there was a risk of landslides. Nepal earthquake

At least 30 people were injured in the capital Kathmandu, where people were shaken by aftershocks. Airports in Kathmandu and the eastern city of Patna shut down as a precaution. The

quake was felt across the Himalayas, from the border with China in the north to the border with India in the south. It struck at a time when people had come out of the gates of temples to witness the summer festival of "Dashain", the Hindu New Year, and many were still inside the buildings when the quake hit. Image: Scores of people were injured in Kathmandu, including dozens of children People in Kathmandu who were awake at

the time of the quake said the building they were in shook violently and their buildings fell down, prompting them to take to the streets in fear. The Nepal Telecommunications Authority (NTA) tweeted: "There is total loss of mains electricity in Bhrikutimandap area of Kathmandu." A major part of the city has been without power for around 24 hours, and the NTA is

reporting downed electricity pylons in some areas. "We are having difficulty contacting any of the essential power stations," an official from the NTA told AFP news agency. "Power lines are falling everywhere." a1d647c40b

What's New In AutoCAD?

Markup Assist is the most accessible
way to generate feedback for your
drawings. (video: 11:10 min.) Email
directly from your browser to invite
comments from your coworkers

without having to email, type in a web form, and wait for an email. (video: 1:50 min.)

Message Boards: Request feedback directly from colleagues by sending them an instant message with your question. Or, get notifications about new messages and threads on the forum. (video: 4:10 min.)

Chat or video conference with your coworkers while you design. (video: 10:33 min.)

Markup your designs with

comments, and collaborate with colleagues online or on paper. (video: 6:15 min.) Also, AutoCAD is the industry standard for creating and sharing design drawings with CAD data.(CNN) — A crescendo of angry cries, a combination of anguished wailing and confused shrieking, broke the drowsy silence of the predawn hours. Without warning, a powerful earthquake has shaken much of southern Mexico. Some 50

people are reported dead, some injured, and some trapped under rubble in Guerrero state, according to the governor of Guerrero, who said that there were no initial reports of major damage. Three children have been confirmed dead in the epicenter. The magnitude-7.1 quake occurred around 2:30 a.m. local time Wednesday. The epicenter was in the Pacific Ocean, near the border with Guerrero, according to the U.S.

Geological Survey Among the dead were 10 people in a restaurant in Ixtapa, Guerrero, and six in a house in Taxco, Guerrero. The death toll will be updated as more information becomes available, Governor Alfredo Castillo said. The earthquake caused buildings in some of the city's tourist districts to sway and knock down several walls. The earthquake happened as many tourists were staying awake in bars

and discos late in the evening. There was no immediate word on any significant damage. Volunteers gather to help a victim in Taxco, Guerrero. Castillo said there were serious reports of missing people in the damaged parts of the city. Communications in the city were down and rescuers were reaching people trapped in collapsed houses. The quake was felt strongly in the Mexican states of Michoacan,

Guerrero, Morelos and Puebla and
